MIRACLE
SOFTWARE SYSTEMS

Dev Workshop | IoT APIs 101 with StrongLoop and Bluemix

Interconnect Academy | February 24th, 2016

Aditya Chinni
Lead – Miracle Innovation Labs
Miracle Software Systems, Inc.

Chanakya Lokam
Director Marketing and Innovation
Miracle Software Systems, Inc.

The Expert Team

Chanakya Lokam

Director Marketing and Innovation

clokam@miraclesoft.com

A Miracle University Graduate, a perfectionist and a design/technology enthusiast who travels every week!

Aditya Venkat Chinni

Lead – Miracle Innovation Labs

vchinni@miraclesoft.com

Also a Miracle University Graduate and a believer that Technology can change the world; Welcome the Bluemix Guru to the room!

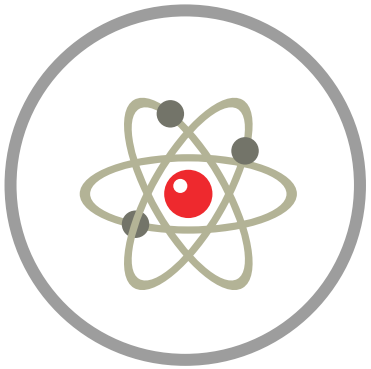
MIRACLE SOFTWARE SYSTEMS

The Miracle Story

Customer Satisfaction

Affordable Innovation

Quality and Efficiency



Talent Eco-System

12 Global Locations

15+ Technology Partnerships

25+ Technology Accelerators

20+ Years of Expertise

500+ Certified Professionals

85+ Fortune 1000 Customers

2000+ Employees Globally

MIRACLE SOFTWARE SYSTEMS

Miracle Innovation Labs

Empowering Change through Innovation

Our Teams leverage years of **real-time experience** and **applied research** to bring value-added and innovative services to **your disruptive IT initiatives**.

Cost Differentiation and **Labor Savings** alone are not enough for an enterprise to grow!!

MIRACLELABS
EMPOWERING CHANGE THROUGH INNOVATION

Completely HANDS-ON ☺

15 minutes of boredom followed by lots of **awesomeness!**

Focus on Digital Technologies

2 Hours of code for you ☺

Completely Guided Labs

Innnnooooovation all the way!

Goals for the Day!

- ✓ **Connect** and **Register** an OBD II Simulator to IBM Bluemix Cloud
- ✓ **Collect** Data in Node Red and **Wire** the data flow for various sensors
- ✓ **Create Actions** around the data and **Store** the Data into Cloudant DB
- ✓ **Create a REST API** for this sensor data using StrongLoop
- ✓ **Make sure that everybody has fun** ☺

MIRACLE
SOFTWARE SYSTEMS

An Explosion of Possibilities

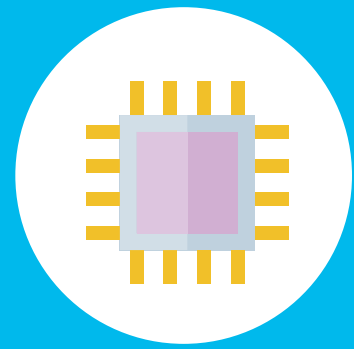
50 Billion Connected Devices that can compute and communicate!

Digital Transformation

2.5
Quintillion
bytes of data will be created daily

85%
of enterprises Will use external cloud services

534
Billion USD
will be made in mobile transactions

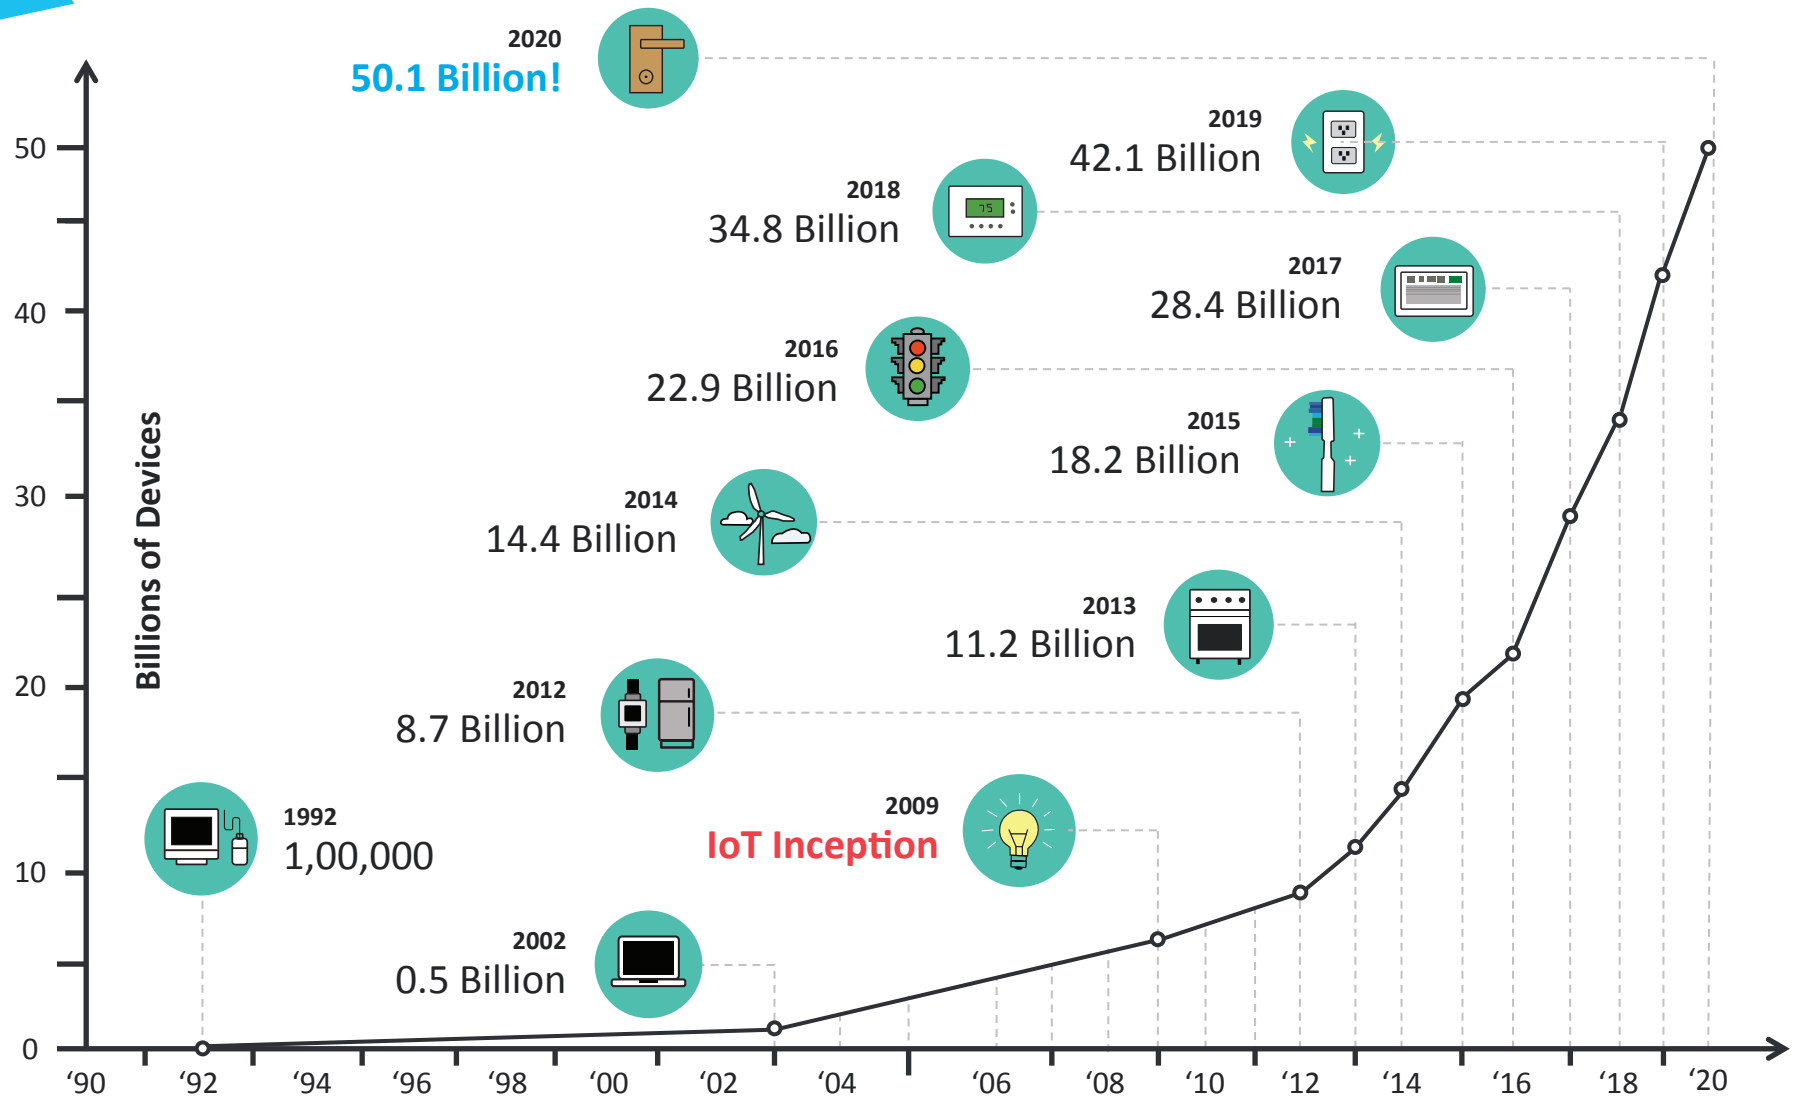


4.9
Billion
connected things in use today

75% of Fortune 1000 companies will have public APIs

GET POST PUT DELETE API Economy

An Explosion of Possibilities



MIRACLE SOFTWARE SYSTEMS

An Explosion of Possibilities

"From homes to retail stores, things around you are starting to become **intelligent** and **communicate** with each other! **Welcome to the new age of Connected Things ☺**"

An Explosion of Possibilities

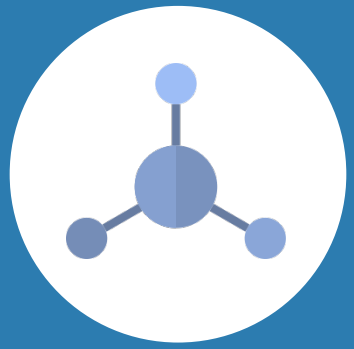
What can you do with IoT Data?

Predict

Outcomes and demand through data and patterns collected by connected things

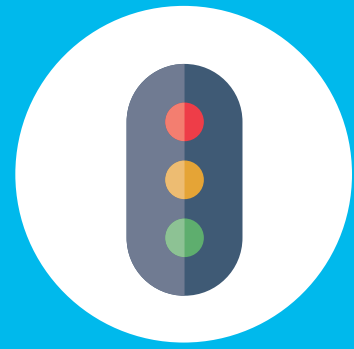
Monetize

Data coming from your network of things and expose to the world for innovation



Extend

Your devices and sensors as APIs and Services to be consumed in innovative ideas



Control

Machines, homes and more through your smart phones and network of connections

Control your car with a mobile device (or) predict machine health and failure with a sensor!

MIRACLE
SOFTWARE SYSTEMS

IBM Bluemix and the IoT Foundation(IoTf)

Connect Devices and Sensors to the Cloud in minutes ☺

IBM Bluemix for Innovation

Rapidly bring new products and services to market at lower cost

Build your apps, your way
Use the most prominent compute technologies to power your app: Cloud Foundry, Docker, OpenStack.

Deploy and manage hybrid apps seamlessly
Get a seamless dev and management experience across a number of hybrid implementations options.

Balance agility with quality, security and governance.

Scale more than just instances
Development, monitoring, deployment, and logging tools allow the developer to run and manage the entire application.

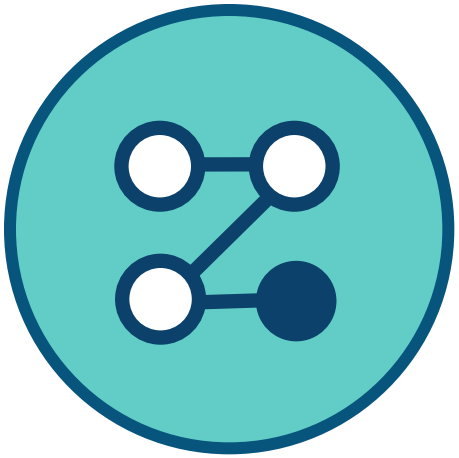
Layered Security
IBM secures the platform and infrastructure and provides you with the tools to secure your apps.

Extend existing IT investments into cloud business and delivery models

Extend apps with services
A catalog of IBM, third party, and open source services allow the developer to stitch an application together quickly.

Flexible Pricing
Try compute options and services for free and, when you're ready, pay only for what you use. Pay as you go and subscription models offer choice and flexibility.

IBM IoT Foundation



Responsive Connectivity

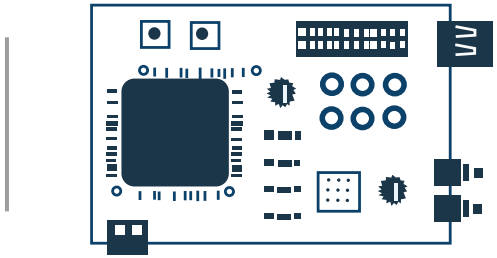
Device Management

Secure Communication

Storage and Access to Data

IBM Bluemix

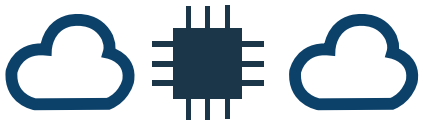
Understanding Things?



Your device or gateway

MQTT

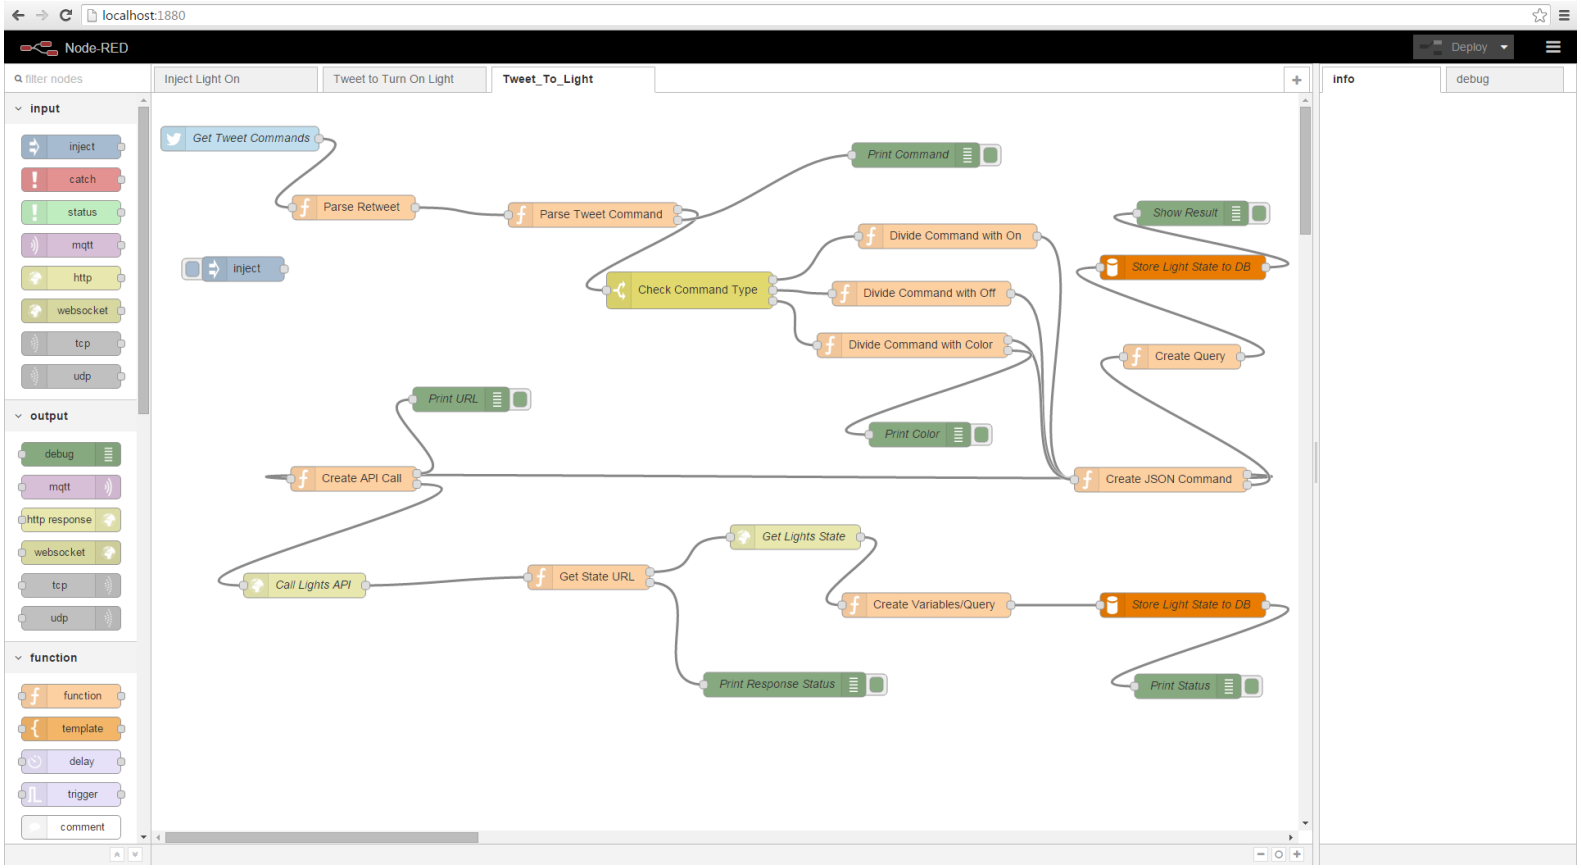
REST and Real-Time APIs



IBM Internet of Things Foundation

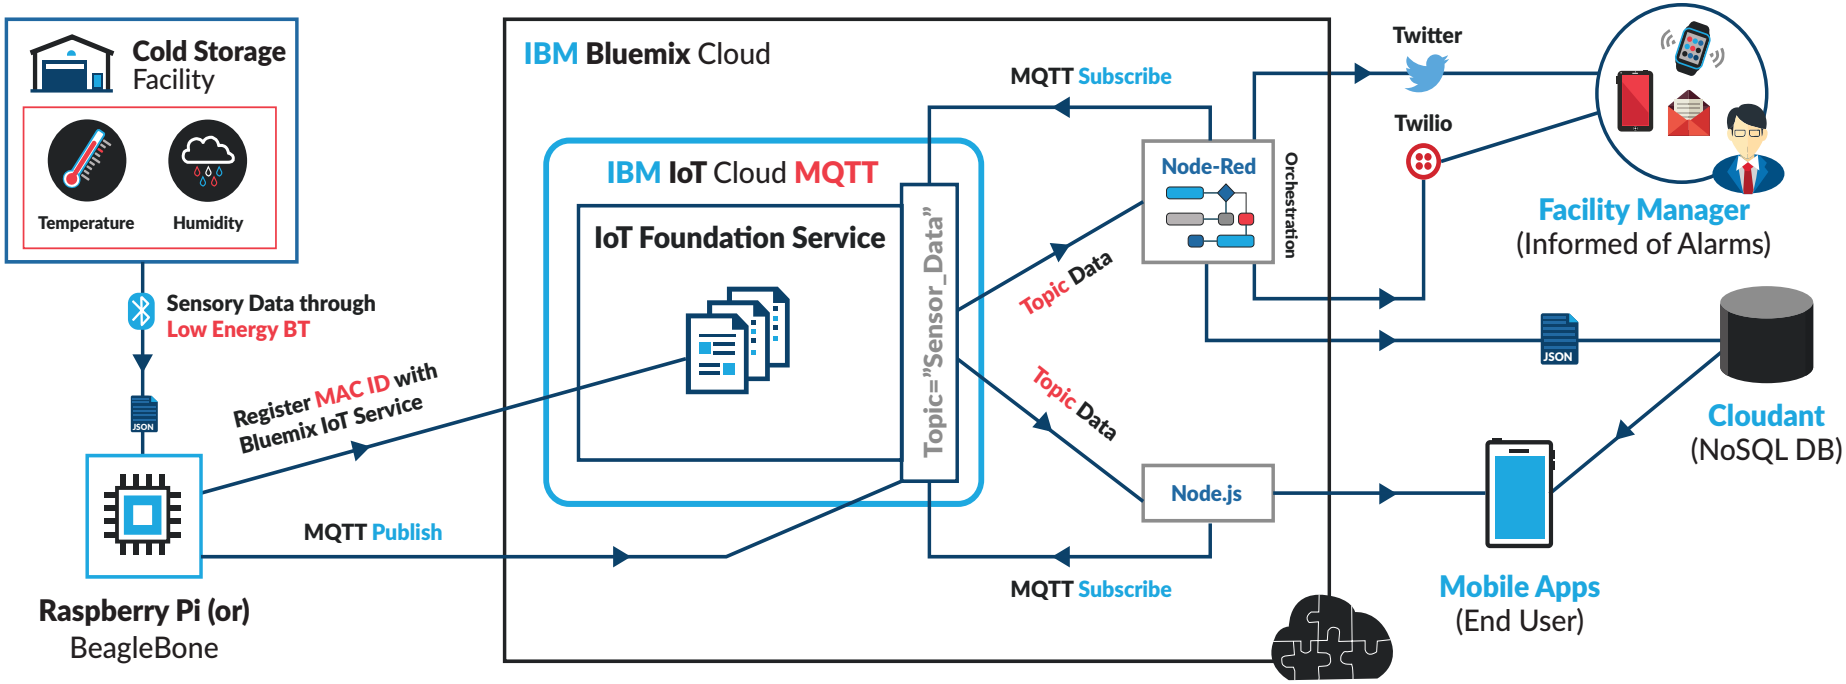
Your application and analytics

Introducing NodeRed



A Visual Tool for **WIRING** the **Internet of Things** ☺

Exploring IoT @ A Cold Storage Facility



IBM Bluemix, NodeRed and Raspberry Pi for a Connected Cold Storage Facility

MIRACLE SOFTWARE SYSTEMS

MIRACLE
SOFTWARE SYSTEMS

Lets go Hands-On with IBM Bluemix

Follow Us and Let us know if you need help ☺

#1 | Get the Tutorial Pack

Option #1 : Go to
https://github.com/MiracleLabs/IotApis101Lab
and download the ZIP File using the UI (or)

Option #2 : Use the following command to download directly from Terminal/Command Prompt

curl –Lo master.zip https://github.com/MiracleLabs/IotApis101Lab/zipball/master

#2 | Login to IBM Bluemix

www.bluemix.net

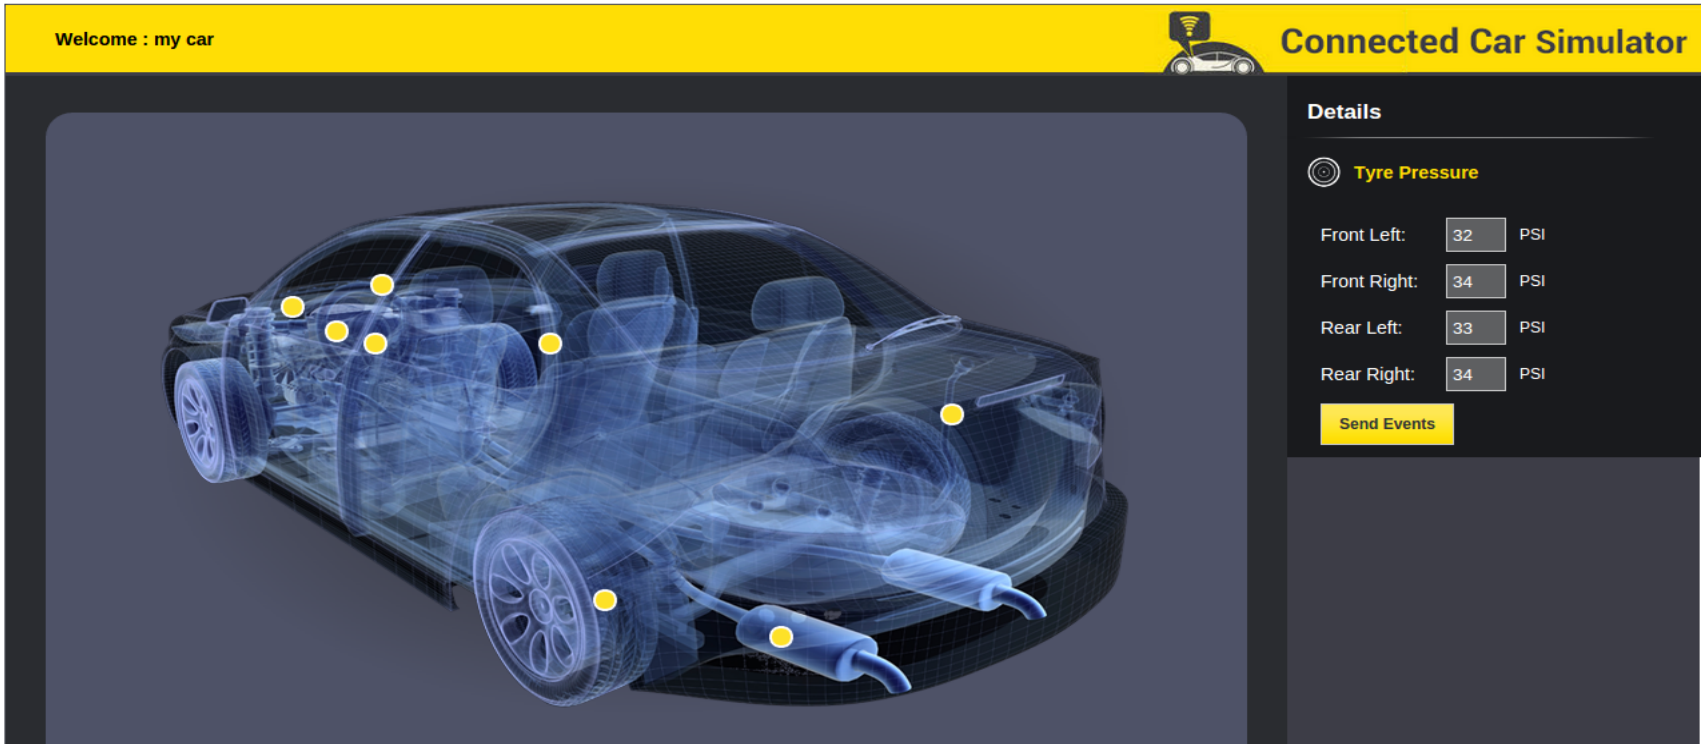
Create your organization and space for development

#3 | Create IoTF Application and Service

- Select **Internet of Things Foundation Starter** from the Application Boiler Plates
  - You will get a **Node.js** based SDK and **Cloudant NoSQL DB** as default within the application
- Once the application is staged, go back to the Catalog and create a new **Internet of Things Foundation Service**
  - **Bind** this service to the your IoTF Starter Application
- **Restage** your application(2-3 Minutes)!

#5 | Start and Test the Simulator

- Got to the Simulator in the **GitHub Repo** and access **index.html** from a web browser



#6 | Register Your Device with IBM IoTf

- Launch the **IoTf Dashboard** from the IoTf Service that you created in **Bluemix**
- Create a new Device Type called **“vehicle” and** Create a new **Device** in the dashboard
- Get the following **configuration data** for the device
  - Authentication Token
  - Device ID
  - Organization ID
  - Authentication Method
  - Device Type

#7 | Configure your Simulator

- Open **/js/realtime.js** and add the below configuration data to the file(Your Device Config Data needs to be added)
  - **var deviceToken** = <Your Authentication Token>
  - **var deviceType** = <Your Device Type>
  - **var deviceId** = <Your Device ID>
  - **var orgId** = <Your Organization ID>
- Save your file after the changes and re-run the **index.html** file

#8 | Visualize Data in Bluemix/NodeRed

- Check the **flow of events** and **connection status** in the IoT Foundation Dashboard
- Go back to your IoTF Application and access the **Node Red Flow Editor** within Bluemix
- Create a Flow to print the simulator data by using the following nodes,
  - **IBMIOT Node = Get data from the IoT Foundation Service**
  - **Debug Node = Print the Simulator Data to the Debug Column**
  - **Function Node = Filter the JSON response of the simulator**
- Once completed **deploy** the flow and check in the **debug** column

#9 | Store Sensor Data in Cloudant

- Access the **Cloudant DB Dashboard** from the Application that you created
- Create a new DB **“vehicle_data”** in the dashboard
- Add the **Cloudant Node** to your NodeRed Flow and configure the properties
- Connect the function node to the Cloudant node instead of the Debug Node and Deploy the flow
- Note that the Cloudant node stores the **msg.payload** property by default

#10 | Access Cloud9 and Create Space

- Login (or) Sign Up at **http://c9.io**
- Create a new **workspace** and call it "StrongLoopSpace"
- Select the **Node.js Template** when prompted

- Install **StrongLoop** with the following npm command,
  - **npm install –g strongloop**

#11 | Create the StrongLoop REST API

- Start by creating the Application Model with the command **slc loopback**
  - Remember your Directory/Application Name
- Navigate to your application with **cd <app-name>/server** and open the **datasources.json** file and add the Cloudant Connector details(JSON)
  - You can also use the GUI of Cloud9 to access the file
- Install **Cloudant Connector** with the **npm install loopback-connector-cloudant** command

#12 | Create the Loopback Model

- Create the loopback model by using the **slc loopback:model** command
  - Enter the Model Name
  - Select the Cloudant DB as your Data Source
  - Select the PersistedModel as the Base Class
  - Add your required properties for the model
    - For example add **fuel** and **deviceId** as String Types
- Run the StrongLoop API Explorer by using the command **node .** and open the link **http://0.0.0.0:8080/explorer** from the terminal

#13 | Add Loopback:Model to NodeRed

- For the flow to execute properly we must **add the loopbackModel name** to our NodeRed Flow
- Replace the function node with the following,

---

msg.payload = {“fuel”:msg.payload.d.fuel,
”loopback__model__name” : <Your Model Name>}

- **Go to the Explorer and test the GET Operation!**
